#### Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the true problem and the person experiencing it, considering things from the user's perspective along with their goals and challenges.

#### Persona: Employee booking a meeting room

| What does the Employee THINK & FEEL?                                                                                                                                                                                                                           | What does the Employee SEE?                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>Needs to confirm a meeting room quickly without delay</li> </ul>                                                                                                                                                        | <ul style="list-style-type: none"> <li>A shared spreadsheet or notice board used for bookings</li> </ul>           |
| <ul style="list-style-type: none"> <li>Worried about double-booking or losing the room to someone else</li> <li>Wants confidence that the booking is confirmed and on record</li> <li>Frustrated by depending on someone else to check availability</li> </ul> | <ul style="list-style-type: none"> <li>Rooms shown as occupied despite being reserved by someone else</li> </ul>   |
|                                                                                                                                                                                                                                                                | <ul style="list-style-type: none"> <li>Long email threads trying to confirm a free slot</li> </ul>                 |
|                                                                                                                                                                                                                                                                | <ul style="list-style-type: none"> <li>No live view of which rooms are free at a given time</li> </ul>             |
| What does the Employee HEAR?                                                                                                                                                                                                                                   | What does the Employee SAY & DO?                                                                                   |
| <ul style="list-style-type: none"> <li>Colleagues complaining about room clashes during meetings</li> </ul>                                                                                                                                                    | <ul style="list-style-type: none"> <li>Calls or messages the admin to check room availability</li> </ul>           |
| <ul style="list-style-type: none"> <li>Manager asking why the meeting room wasn't ready on time</li> <li>IT/Admin team saying "please raise a request and wait"</li> <li>Team members suggesting unofficial "first come, first served" rules</li> </ul>        | <ul style="list-style-type: none"> <li>Sends multiple emails to coordinate a free slot</li> </ul>                  |
|                                                                                                                                                                                                                                                                | <ul style="list-style-type: none"> <li>Physically checks the room before a meeting to confirm it's free</li> </ul> |
|                                                                                                                                                                                                                                                                | <ul style="list-style-type: none"> <li>Re-confirms the booking close to the meeting time out of doubt</li> </ul>   |

### Key Insights from the Empathy Map

- Employees value speed and certainty above all — they want to know instantly that a room is reserved for them.
- The biggest source of frustration is the lack of a single, real-time source of truth for room availability.
- Administrators are equally burdened, since manual tracking makes approvals slow and error-prone.
- Trust is rebuilt through automation: validated bookings, automatic status updates, and instant email confirmation remove the guesswork for everyone involved.

Proposed System Architecture

The diagram below illustrates how the Meeting Room Booking System components interact within ServiceNow App Engine Studio to directly address the pains and needs identified in the empathy map above.

How the Architecture Addresses Each Pain Point

| Pain Point                 | Architecture Response                                                                                       |
|----------------------------|-------------------------------------------------------------------------------------------------------------|
| Double booking             | Booking Form + Client Script validate time slots before the record reaches the Booking Table                |
| No real-time visibility    | Centralized Meeting Room Booking Table acts as a single source of truth, feeding the Dashboard              |
| Manual coordination delays | Business Rule auto-sets status, and Flow Designer automates the approval and notification process           |
| No booking history         | All bookings persist in the custom table, exposed through Reports and the Dashboard                         |
| Approval delays            | Email Notification alerts the Administrator immediately so bookings can be reviewed without follow-up calls |
