

Project Design Phase

Problem – Solution Fit Canvas

Date	30 June 2026
Name	Nadin Surya S
Project Name	Meeting Room Booking System using ServiceNow App Engine Studio
Maximum Marks	2 Marks

1. CUSTOMER SEGMENT(S)

CS

Who is your customer?

- Employees who need to book meeting rooms for discussions, interviews, training, or client calls
- Administrators / facility managers who oversee room allocation and approvals
- Department managers who organize team or client meetings

6. CUSTOMER CONSTRAINTS

CC

What constraints prevent customers from acting?

- No real-time visibility into room availability
- Manual approval process is slow and depends on individual availability
- Limited access to IT/ServiceNow knowledge among general staff
- No centralized record of past bookings

5. AVAILABLE SOLUTIONS

AS

What solutions are available today?

- Booking via email or phone calls to admin
- Shared Excel sheet on a common drive
- Physical notice/whiteboard outside room
- Generic calendar invites without validation

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

Which problems do you address?

- Reserve a meeting room for a specific date and time without double-booking
- Get quick approval/confirmation of the booking
- Track status of a submitted booking request
- View booking history and room utilization

9. PROBLEM ROOT CAUSE

RC

Why does this problem exist?

- No centralized, automated system – bookings handled manually via email/spreadsheets
- No validation logic to catch overlapping time slots
- No defined workflow/status tracking from request to completion

7. BEHAVIOUR

BE

What does the customer do to solve it / get the job done?

- Sends emails or messages to admin asking for room availability
- Manually checks shared sheets or asks colleagues before finalizing a slot
- Follows up repeatedly to confirm if the booking is approved

3. TRIGGERS

TR

What triggers customers to act?

- Upcoming team meeting, client call, or interview that needs a room
- Manager/HR requesting a scheduled discussion
- Realizing a previously planned room is unavailable (double booking)

10. YOUR SOLUTION

SL

Your current solution

- Custom ServiceNow application (App Engine Studio) with a dedicated booking table
- Online form to capture employee, room, date, time and purpose details
- Client Script validates End Time > Start Time before submission
- Business Rule auto-sets status to "Pending"; Flow Designer updates status & triggers email notification
- Dashboard & reports give admins booking/utilization visibility

8. CHANNELS OF BEHAVIOUR

CH

8.1 ONLINE

- ServiceNow portal/application form
- Email notifications

8.2 OFFLINE

- Verbal/in-person confirmation with admin (legacy method, to be replaced)

4. EMOTIONS: BEFORE / AFTER

EM

How do customers feel before and after?

- **Before:** Frustrated and uncertain – unsure if the room is free, anxious about double-booking, irritated by slow manual approvals
- **After:** Confident and in control – instant validation, clear status tracking, and transparent booking history build trust in the process
